# THE VANISHING ACT

How loud counting vanished in 2 months?

## A TRUE STORY

We were working with the youngest daughter of a parents and preparing her for the Grammar school examination in Sep 2024. Impressed with her improvement she wrote to us on 28th Nov 2023.

I have a Year-10 daughter too. She is attending a comprehensive school. Although she doesn't like Maths, her grades are B. She never tried for the Grammar school exams, since we moved here when she was in Year-5. Can you help her too?

We scheduled her MQ test. Her MQ score was 0.29. On the MQ scale\*, it was very poor. She was taught to speak aloud and use her fingers to count. This required a considerable effort. It was hindering her progress. We understood her difficulty and created a customised plan for her.

# MAGICAL METHODS

\*MQ Scale below

MAGICAL METHOD<sup>®</sup>

MQ: Mind Quotient

Mind Quotient	Inference
0 – 0.3	Very Poor
0.31 – 0.50	Below Average
0.51 – 0.60	Average
0.61 – 0.70	Above Average
0.71 – 0.80	Good
0.81 – 0.90	Very Good
0.91 – 0.95	Excellent
0.95 – 1.00	Extremely Good
Above 1.00	Top Class

## What is an MQ Score?

MQ (Mind Quotient) is a standard developed by Magical Methods which gives you an idea of the ability of your child. Via the MQ Test, we measure different skills of a child which contribute to success. Through the MQ test we are able to understand clearly the problem areas of the child. It requires about 30 minutes of One-to-One online live interaction with the Magical Methods Teacher.

The student was counting aloud using her fingers. Her logical reasoning ability, critical thinking, problem-solving ability, concentration and memory needed considerable improvement.

**We then scheduled her 12 classes and started working with her.**

## MAGICAL METHODS

The journey was very difficult. We continued working with her on her concentration, hand-eye coordination and mental addition and subtraction of one-digit numbers. She got over her struggles after 9th class and started catching up with the speed. We noticed that her counting loudly was vanishing slowly. She was also becoming quieter with every session.

We wrote to her mother on 4th February 2024.

Have you checked with your daughter lately?

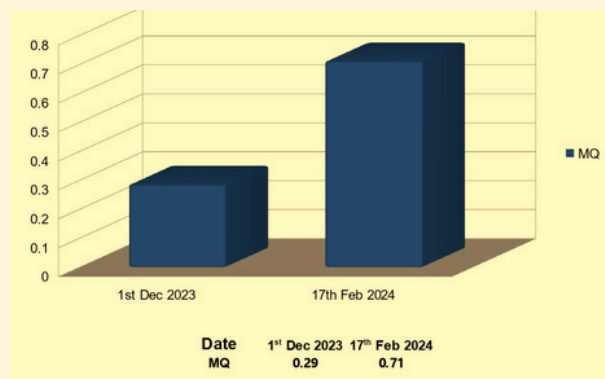

She was counting aloud when she had joined. Now, her loud counting has vanished completely.

She replied.

Yes. Thank You for your efforts.

I can see her bright eyes when she is out from the sessions.

On 17th Feb 2024 we took her MQ test and found that her MQ score improved from 0.29 to 0.71. An improvement of about 1260%. But we were little away from our target MQ score. According to our research, to become successful the MQ score of a student should be above 0.81. We wrote to her mother.

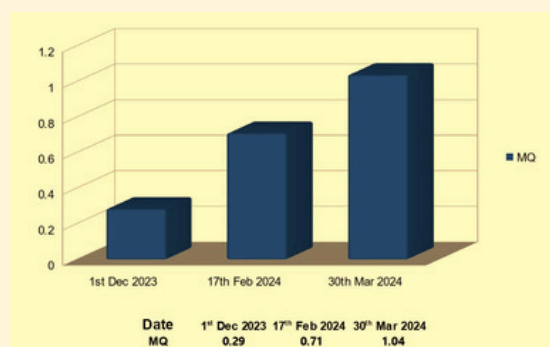

Now she is much better. But the **gap** is still there. If you can plan 12 classes more than that will help her. Thank you.

Her Mother replied quickly

Thank you so much. My daughter says that she would like to continue.

Her mother enrolled her for another 12 classes.

We scheduled her 12 classes and started working. Her speed & accuracy started improving quickly. After 12 classes, we were confident that we had overachieved the target MQ score. Her MQ score improved from 0.71 to 1.04. A jump of 0.33. An improvement of about 990%.

We were satisfied with our work. We had a happy customer. Now, she has enrolled her other daughter into our course.
